## EXPERIENCE

### Code With Us

May 2021 – Present

#### Software Coding Instructor

San Francisco, CA

- Architected full-stack curriculum across 8+ languages/frameworks (Python, JavaScript, Java, C#, Unity, React) for 100+ students, teaching OOP, data structures, algorithms, and modern development workflows
- Achieved 85%+ retention rate and 25% engagement improvement through personalized learning paths, adaptive difficulty scaling, and gamified progress tracking using custom assessment tools

### Minerva Project

Aug 2018 – Apr. 2021

#### Product Team Intern - Technical Team

San Francisco, CA

- Led cross-functional team of 15 engineers across 7 cities, supporting 3,000+ enterprise clients through technical troubleshooting, QA testing, and platform optimization
- Owned bug lifecycle for Active Learning Forum: triaged and documented 1,000+ issues, improving stability and reducing critical bug resolution time by 40%

### ClinCapture

Mar. 2019 – Sept. 2020

#### Product Operations & Analytics

San Francisco, CA

- Architected data-driven segmentation system using Python/R on 20-year database, applying clustering algorithms to identify \$2M+ revenue opportunities and shape product-market fit strategy
- Built competitive intelligence pipeline analyzing 5,000+ B2B prospects through web scraping and NLP, enabling 40% faster sales cycle and informing GTM strategy
- Designed Salesforce analytics dashboards tracking 15+ KPIs, uncovering cost optimizations that improved SG&A efficiency by 27%

## PROJECTS

### PunchIn - Workforce Management Platform | *React, Node.js, PostgreSQL, Next.js, Vercel*

- Built full-stack SaaS platform with multi-tenant architecture for timesheet tracking, payroll automation, and team collaboration, featuring role-based access control and serving 1,000+ users with 99.9% uptime
- Engineered automated payroll engine with allowances/deductions workflows, real-time attendance tracking, and analytics dashboards, implementing SOC 2 compliant security and RESTful API architecture

### Monte Carlo DCF Valuation Platform | *Python, React, NumPy, Pandas, Plotly, Vercel*

- Developed probabilistic financial modeling tool using Monte Carlo simulation with 10,000+ iterations to quantify startup valuation risk through enterprise value distribution analysis across multiple scenarios
- Built interactive interface for inputting revenue projections, WACC, and growth assumptions, generating dynamic DCF models with probability distributions, percentile outcomes (P10, P50, P90), and sensitivity analysis visualizations

## EDUCATION

### Minerva University

Aug. 2017 – May 2021

#### Bachelor of Science in Computer Science & Finance

San Francisco, CA

- ★ **Concentrations:** AI/ ML, Product Development, Strategic Finance, Venture Valuation

## SKILLS

**Languages & Frameworks:** Python, JavaScript, SQL, R, Java, C#, HTML/CSS, React, Node.js, Next.js, PostgreSQL

**Tools & Platforms:** Git, Salesforce, Tableau, Notion, Jira, Figma, Google Analytics, NumPy, Pandas, Plotly, Vercel
